

KATHREIN supplies the antenna system for German Air Traffic Control (DFS)

KATHREIN

Final assembly of the 26 meter long antenna in the courtyard

KATHREIN delivered a 26 meter high antenna system for the German Air Traffic Control (DFS).

DFS uses high-performance antennas from KATHREIN, among others, for air traffic control, communication and instrument-based landing systems.

Due to the high air traffic safety requirements, these antennas must be robust, weather-resistant, durable and largely fail safe.

Thanks to all employees involved who have contributed making our airspace a little safer again.
